TECHNOLOGY

INTEGRATED DOCUMENT WORKFLOW SOLUTION **FOR HEALTHCARE PROFESSIONALS**

Automate your healthcare document processes to reduce costs while protecting patient information and bringing new levels of efficiency to healthcare organizations.

As healthcare organizations move towards fully adopting Electronic Health Record (EHR) systems, medical professionals are looking for ways to quickly and easily convert paper-based documents to electronic formats, relieve the paperwork burden on providers, and implement security safeguards to comply with the Healthcare Insurance Portability and Accountability Act (HIPAA) standards and other regulatory restrictions.

Konica Minolta's Healthcare package for the award-winning Dispatcher Phoenix advanced document workflow application addresses today's healthcare challenges by streamlining and automating medical document processing tasks. With Dispatcher Phoenix's cost-effective and easy-to-use solution, patient records can be quickly scanned, processed, and shared, helping hospitals and clinics control costs and maximize their operational efficiencies.

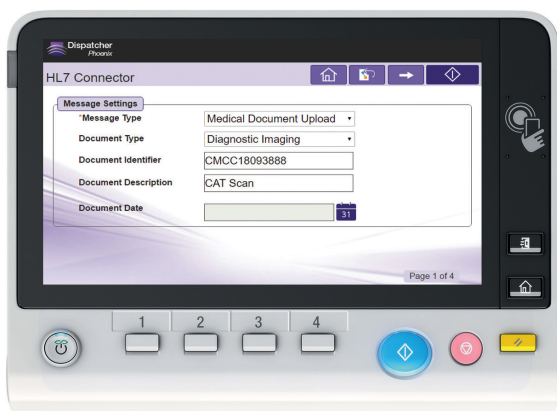

Dispatcher
Phoenix

PATIENT RECORDS

CONNECTED AND SECURE

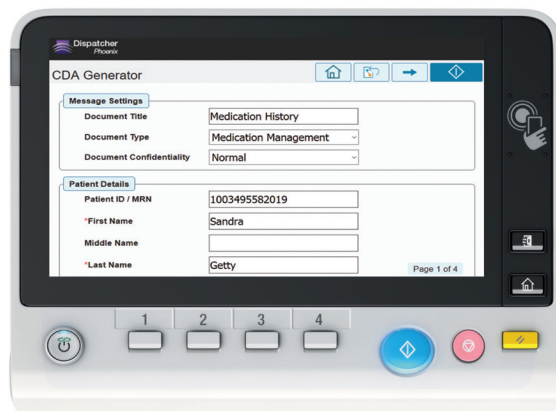

Securely distribute patient information.

Supporting the Health Level-7 (HL7) industry standard for data exchange, Dispatcher Phoenix helps clinical and administrative staff securely send patient records directly to any major medical system, such as an Electronic Health record system. Using Dispatcher Phoenix's intuitive interface at the MFP, staff can easily look up patient data, input additional information such as patient name and medical record number, choose the appropriate document type, and send their patient records as an HL7 message to their patient's EHR.

Automatically convert patient records to industry standards.

Dispatcher Phoenix can be used to convert patient documents to the Clinical Document Architecture (CDA) standard set forth by HL7, allowing important patient documents to be read by any EHR and EMR system. Dispatcher Phoenix's CDA Generator provides healthcare organizations with the seamless and secure exchange of medical information, keeping healthcare professionals informed about their patients' medical history.

STREAMLINE YOUR MEDICAL DOCUMENT PROCESSING

LOOK UP PATIENT INFORMATION AT THE MFP

Using the Healthcare package for Dispatcher Phoenix, MFPs can be configured to display patient data pulled from an ODBC-compliant database, giving hospital administrators and other healthcare staff easy and direct access to patient information..

UPLOAD HEALTHCARE DOCUMENTS TO ONBASE

Today's healthcare organizations need to make sure that medical information, such as doctor's notes and lab reports, can be shared and accessed immediately. With Dispatcher Phoenix's optional Healthcare package, you can index, scan, and store paper-based patient records, charts, lab reports, claims, and other documents into enterprise content management systems, including Hyland's OnBase, a leading platform in the healthcare industry for managing clinical and back office documents.

EXTRACT PATIENT INFORMATION

Manually entering data from medical forms to other business applications or document management systems is an error-prone and time-consuming process. With Dispatcher Phoenix, relevant patient data can be automatically extracted via OCR zones for use in other applications, including medical backend systems.

MANAGE DOCUMENTS BASED ON BARCODE

As healthcare facilities transition to electronic records, barcodes have become an important method for managing medical documents. Documents can be automatically routed to various destinations, and split, named, and annotated based on the value of the barcode.

IMPROVE SECURITY WHILE REDUCING COSTS

Using Plain Paper for Secure Prescription Printing

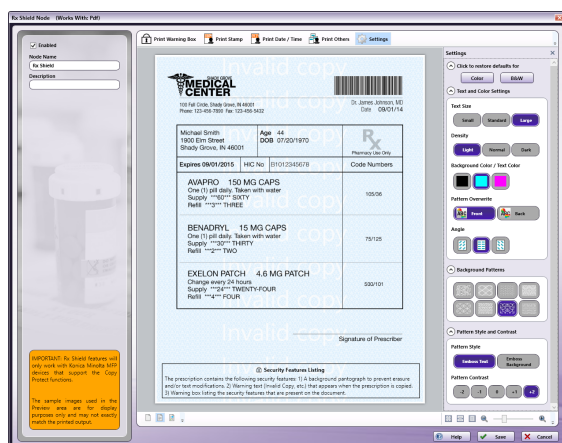

In a networked healthcare environment, regulatory compliance requires a secure method for printing prescriptions. Preprinted forms can be costly and sometimes require dedicated printers. Konica Minolta has a better way: Dispatcher Phoenix's Rx Shield, a simple and secure solution that leverages the power of your MFP.

Developed to conform with regulations issued by the Centers of Medicare and Medicaid Services (CMS), Rx Shield lets you print prescriptions on plain paper, saving money and streamlining processes while complying with tamper-resistant security requirements from CMS.

Rx Shield = FLEXIBILITY

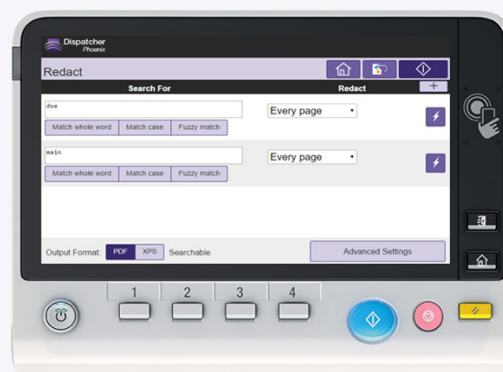

In addition to CMS mandated security procedures, Rx Shield provides a comprehensive solution to customize your prescriptions in a variety of ways with pantograph messaging options, security background and color options, advanced configuration settings, and custom workflow tools.

Your Rx Shield secure prescription printing solution can be set up as an automated process or accessed directly at the MFP - and customizing your settings can be as easy as tapping a few buttons on your MFP touchscreen.

MAINTAIN SECURITY STANDARDS

To assist with HIPAA compliance, Dispatcher Phoenix provides support for HID authentication, audit trails to identify where documents are going, and file conversion to password-protected PDFs. For complete tracking, a copy of each message or document can be sent to a specific email inbox. And, to ensure the confidentiality of patient information, an intelligent redaction process can permanently remove all Personally Identifiable Information (PII) and Protected Healthcare Information (PHI) from medical records. Medical professionals can easily redact the necessary patient information during scan time by entering in the required search terms at the MFP panel. For the utmost flexibility, this advanced redaction solution can be set up as an automated process as well.

BUILT TO SUIT YOUR **BUSINESS NEEDS.**

The Dispatcher Phoenix family of automated document workflow solutions also includes:

DISPATCHER PHOENIX SCANTrip

Perfect for businesses of all sizes, Dispatcher Phoenix ScanTrip simplifies core scanning workflows, including extracting data from paper and electronic files, converting documents to searchable PDFs, distributing documents to popular cloud applications, and more.

DISPATCHER PHOENIX RELEASE2ME+

As a convenient and secure follow-you print solution, Release2Me+ enables organizations to further secure their print and scan-to workflows while utilizing OCR capabilities for data extraction and document conversion.

DISPATCHER PHOENIX

An advanced document processing and workflow automation solution with sophisticated tools for rules-based file distribution. In addition to the Healthcare package, a variety of optional vertical market packages can be added onto the Dispatcher Phoenix license, including:

Legal: Speed up and simplify legal document processing with automated Bates stamping, redaction, connectors to document management systems and more.

Government: Helps state and federal agencies manage documents with greater security and accessibility. Includes Dispatcher Phoenix's Copy Defender functionality to secure printed documents, along with support for CAC/PIV authentication and Scan-to-Me/Scan-to-Home capabilities.

Education: Advanced features for educators include an automated bubble sheet grading solution, a web-based bubble sheet generator tool and more.

Finance: Capture, process and distribute financial documents with automated file conversion, advanced OCR and more.

ECM: Manage unstructured content with powerful batch scanning and indexing capabilities. Features a Desktop workstation that connects to any high-speed, TWAIN-based scanner, along with web-based batch indexing, document verification and batch reporting tools.

MORE WORKFLOW **FLEXIBILITY**

Modular Add-On Options

Dispatcher Phoenix is scalable, allowing you to add additional features once your business needs change. Options include forms processing, advanced OCR with document classification, barcode processing, redaction, advanced job routing and much more.

Multiple Connectors Available

Other connectors to popular content management systems and Cloud storage service solutions are available, including: Box.com, Dropbox, FileAssist, Google Drive, Laserfiche, M-Files, Microsoft SharePoint, OnBase, OneDrive, OneDrive for Business, SharePoint Online, WebDAV, Workshare, Worldox.
